Report of Incident Notifications

Hard Chrome Platers Spill, La Vergne, TN

A water hose was placed into a 1,100 gallons hexavalent vat sometime over the weekend and left running. The vat overflowed and ran about 1000 feet across the gravel facility and down a drainage ditch. The RP hired an environmental cleanup to stabilize the site this evening by using a vac truck to recover free liquid and place plastic sheeting over the spill for protection from the rain. More aggressive removal activities will begin at first light. TDEC and FOSC mobilized to ensure cleanup operations continue.

DuPont LaPorte Facility, La Porte TX

On 11/15/14 a chemical release of Methyl Mercaptan resulted in four fatalities, one injury, and a shelter in place for the facility. Upon notification of the spill, R6 deployed an OSC and START contractor support. Upon arrival at the incident on 11/15/14 the EPA team began documenting site activities.

Phillips 66 (Bayway) Facility, Linden, NJ

On 11/16/14 a release of acid gas to a flare (releasing about 4,150 pounds of DO2 to the atmosphere) was reported to the NRC. A Region 2 OSC responded. Air monitoring was performed at the facility perimeter with no detections.

There were 25 epaosc.org websites created and/or updated during this reporting period (11/14/14-11/17/14).

Exercises/Predeployments

There is a Region 7 Full Scale Exercise in Kansas City starting 11.17/14.

Regional Daily Ops Status Report

Reported activities primarily represent NRC notifications with some State-level and other notifications to Regional Phone Duty Officers.
